STEM CELL RENEWAL

**NICOTINAMIDE MONONUCLEOTIDE (NMN) + TRANS-RESVERATROL**

UNLOCK CELLULAR RENEWAL AND LONGEVITY

A 2022 study published in International Journal of Molecular Science found that NMN supplementation restored mitochondrial function and reduced cellular aging in mesenchymal stem cells (MSCs). It did this by increasing NAD levels and activating SIRT1, a key longevity protein, effectively rescuing senescent MSCs.

Supplementation with NMN has been shown to enhance the self-renewal capacity of mesenchymal stem cells (MSCs), which are essential for this repair, regeneration, and immune modulation.

When paired with trans-resveratrol-a potent antioxidant known to activate the longevity-related SIRT1 pathway-this combination supports cellular energy production, combat oxidative stress, promote healthy aging at the cellular level.
